

*ISTANBUL, TÜRKİYE, JULY 2021- Marketing*

## **YEO moves to the flexible office concept of the future**

**YEO, Türkiye's leading technology and engineering company, has moved to its smart office consisting of 6 floors and an area of three thousand square meters with a flexible office concept in line with its growth target for the next 10 years. Located in Kartal, Istanbul, the office attracts attention with its smart and digital infrastructure, and YEO will meet its own energy with its 36 kW Roof Solar Energy System.**

---

YEO, which provides complete electrification, automation, digitalization, and engineering services to different sectors in Türkiye and around the world, has moved to its new service building in Kartal, Istanbul. Prioritizing sustainability and digitalization as in all its projects, YEO has built its new service building directly in line with its next 10-year growth target and sustainability.

### **Three thousand square meters of usable space**

The new service building of YEO, which has realized hundreds of projects from energy to water, oil, and gas to cement and mine in **more than 25 countries**, consists of 6 floors. The office covers a total of three thousand square meters of usable area, including 2 thousand 600 square meters of indoor space and 400 square meters of open space.

### **The flexible office concept of the future realized today**

Designed with the flexible office concept of the future, the building was built in Kartal, Istanbul, which enjoys easy and alternative transportation facilities. Allowing 200 people to work at the same time, the workspace can be increased in line with YEO's future goals through the modular system. Baffle ceiling design was made for the isolation as well as the acoustics of the offices, which were designed to perfection in the working areas. Allow for collaborative work, mobile pedestals with cushion and personalized closets maximize the wellbeing level of the employees, while the architectural structure of the offices is also highly appreciated. Designed in line with future goals, modular system designs that allow for relocation were implemented in the building.

### **Self-sufficient building**

Realizing new projects for clean energy and the most efficient use of energy with renewable energy solutions in many parts of Türkiye and around the world, YEO has installed a 36 kW Roof Solar Energy System in its office in Kartal. In addition to the solar energy system that will meet the energy needs of the building, 40 percent energy saving will be achieved thanks to Led Lighting and presence sensors within the scope of Schenider Smart Building solutions. In line with the smart building concept, every detail has been carefully implemented, from continuous monitoring of energy, CCTV, fire and emergency announcement systems, and card access, to high-level personnel security, VRF, and ventilation system control.

### **Much more than a building**

The office concept of YEO, a self-sufficient, smart building concept, also draws attention with its Lounge & Restaurant concept dining area. The health and hygienic dining area, which tens of employees will use every day and can meet their nutritional needs in the comfort of a 5-star hotel without leaving the office, is located in the building. Furthermore, the 6-floor building is designed so that employees and guests can rest on each floor. There are also seven YEO Cafes in the smart building, which includes 400 square meters of open space, recreation areas, and a library that allows for collaborative work.

Located in Kartal, where the population density is high, the office provides great convenience to its visitors and employees with its parking lot. It is protected by 24/7 private security systems. YEO is preparing to sign new projects in its new location.
